

COMPANY PORTFOLIO

Software · Web Applications · Digital Marketing

A studio for businesses that need both halves

Vormir Tech Solutions started with a simple observation: a business rarely needs only software or only marketing. It needs a system that runs the operation, and a way to bring customers to it — and it needs one team accountable for both.

So that is what we built. Seven-plus businesses now run on work we designed, wrote, deployed and trained their staff on. When something breaks at nine at night, you call the people who built it.

100%

BUILT IN-HOUSE

1 Offline-first where it matters

A billing counter cannot stop because the connection did. Our products keep working when the internet does not, and reconcile when it returns.

2 You own what we build

Your data stays on your machines. No per-seat rent for software you already paid to have built, and no vendor holding your operation hostage.

3 Trained, not just handed over

We train your staff until they are faster with the software than without it. Software nobody knows how to use is an expense, not an asset.

4 One team, one number to call

Design, engineering, deployment, training and marketing under one roof — no agency-to-vendor handoffs, and no one to point at when something goes wrong.

Professional services

Six ways we move your business

Most agencies market what someone else built. Most software shops build and disappear. We do both, so the product and the demand for it are designed together.

01

Digital Marketing

Search, social and paid campaigns built around what actually converts — plus local visibility for businesses selling in and around Nagpur.

SEO

Social media

Paid ads

Local listings

03

Web Application Development

Dashboards, portals and customer-facing web apps that stay fast on a mid-range phone and a shop counter tablet alike.

Dashboards

Portals

PWA

Integrations

05

Product Training

Your staff trained on the software until they are faster with it than without it, with documentation they will actually open.

02

Custom Software Development

Purpose-built systems for how your business actually runs — billing counters, ERP, inventory, CRM — including offline-first desktop software.

The Baruch Cafe — Billing Counter

A complete counter-to-kitchen billing system for a working cafe. The team rings up a 142-item menu, fires tickets to the kitchen, tracks twenty QR-coded tables, settles bills and closes the day — on one screen, without waiting for the internet.

WHAT IT COVERS

- 142-item menu with instant search and category filters
- 20 tables with printable QR cards and live status
- Kitchen order board, customers, bills and discounts
- Stock, staff rota and a day-close dashboard

AT A GLANCE

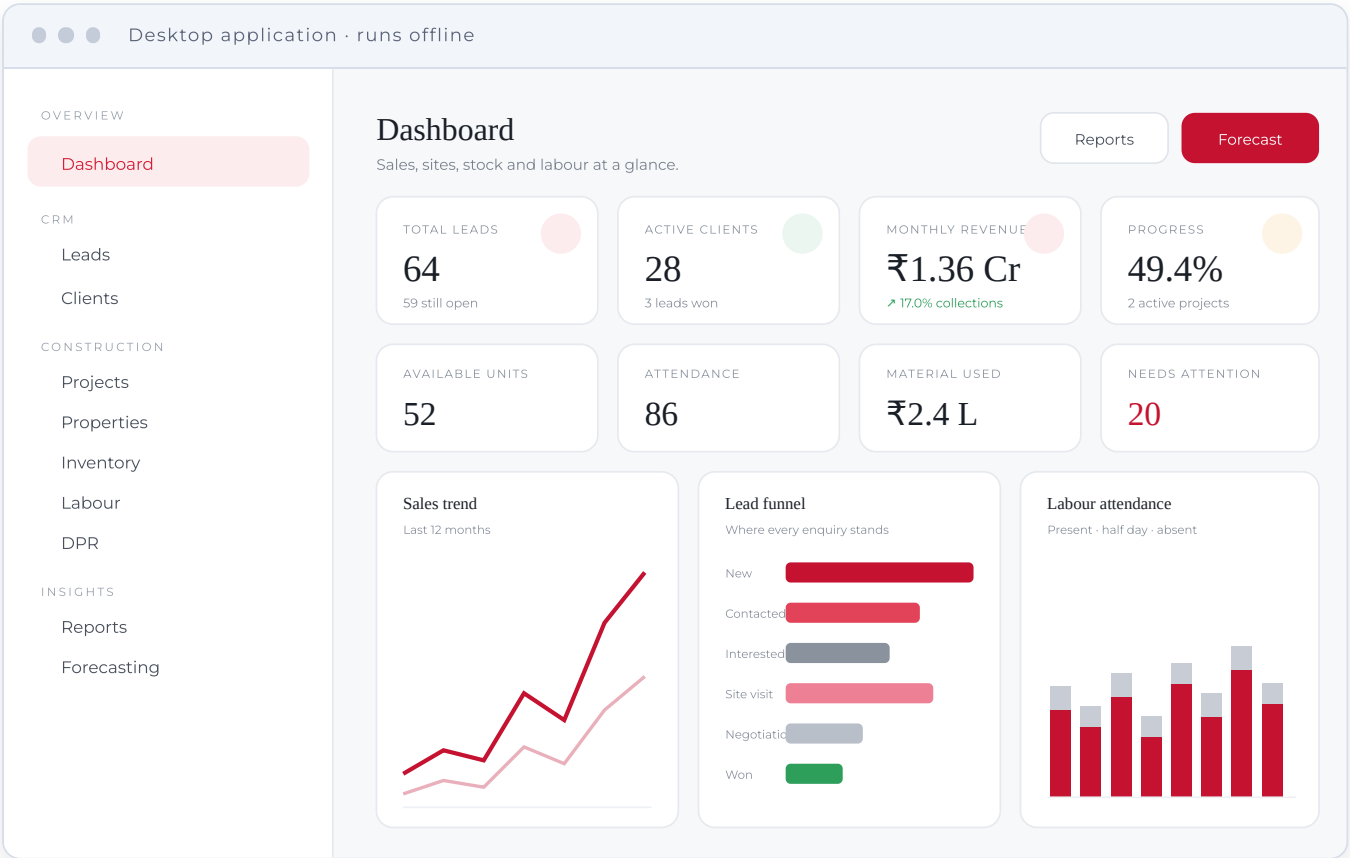

Sector	Food & beverage
Type	Billing & POS web app
Connectivity	Offline-capable
Deployment	Shared counter mode
Status	In daily operational use

— SCREENS IN THE SYSTEM

Real-Estate ERP — Offline Desktop Suite

One offline application covering the whole developer workflow — the enquiry that walks in, the unit it becomes, the site that builds it and the labour that shows up. It runs on site-office machines with no internet connection and no monthly SaaS bill.

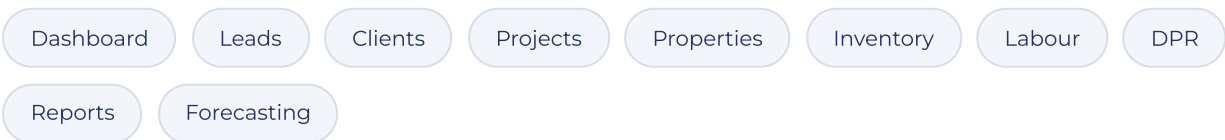

WHAT IT COVERS

- Leads and clients with a full enquiry-to-booking funnel
- Projects, properties and unit inventory with availability
- Labour attendance, material issue and daily progress reports
- Collections dashboard, reports and revenue forecasting

AT A GLANCE

Sector	Real estate & construction
Type	ERP / CRM desktop suite
Connectivity	Fully offline
Data	Private, on your machine
Status	In daily operational use

— MODULES IN THE SUITE

Four steps, no surprises

You always know what is being built, what it costs and when it lands.

01

Understand

We sit with the people who will use the thing — the cashier, the site engineer, the sales desk — and map how the work actually happens today.

02

Design

Screens, flows and a fixed scope you sign off before a line of code is written. No moving targets, no surprise invoices.

03

Build

Short cycles with something you can click at the end of each one. You see progress weekly, not at the end.

04

Launch & train

We install it, train your staff on it and stay reachable afterwards. Then we market it, if that is part of the brief.

WAYS TO ENGAGE

Project

A defined scope, a fixed price and a delivery date. Best for a first system or a clear, bounded build.

Retainer

Ongoing development, marketing and support on a monthly basis, for businesses that keep evolving.

Build & train

We build it, train your team and hand over completely. You run it in-house from there.

WHAT YOU GET AT HANDOVER

A working system installed where it is used, your staff trained on it, written documentation, and a direct line to the people who built it.

Tell us what you are trying to fix.

A counter that is slow, a site office drowning in registers, a business nobody can find online. Call us and describe it — the first conversation is free and specific.
